**Date Accepted:**

## 18.1 – RADIO/COMPUTER COMMUNICATIONS

### A. Terminology and Definitions

1. At: The company is in service at a location other than quarters. The company is available for calls via radio channel “Dispatch 1”. Dispatch is to be given the following information:
  - a. Exact location
  - b. When leaving the location, the company must transmit: “Clear from (location)”.
2. Back: The company has returned to quarters and is available for calls via the “Zetron” radio channel.

Note: Do not use this term when returning to quarters while “out of service” (OOS) due to staffing shortage, mechanical failure or the company is otherwise unavailable for calls.

3. Clear: The company is leaving the current location and is available for calls via Dispatch 1. When clearing, provide the destination in the report.
4. Out: The company is on the scene of an emergency and unavailable for assignment to another call. The term “out” shall be transmitted via MDC and verbally when the responding unit is parked at the location or physical address to which it was dispatched.

Note: When checking out, the company will give the location to which they are checking out prior to the size-up. This is done to confirm the correct location and aid the Dispatchers in keeping track of what companies are where.

5. Status: Availability of a company to respond to calls. There are only three (3) levels of status.
  - a. In Service (Back, Clear, At, In Service) – The company is available for calls via Dispatch 1.
  - b. Out of Service (Out, Out of Service) – The company is unavailable for response for reasons other than assignment to an emergency. The reason for being Out of Service and the estimated time for returning to service must be communicated to Dispatch.

- i. When a company is placed in service on another company's apparatus, (common after or during multiple alarm fires), the MDC will not be used until that company is returned to their own apparatus. As an example, the radio report should be as follows: "The crew of Engine 3 occupies Engine 7 and is in service as Engine 3".
- j. Station Officers are responsible to see that all personnel are trained in the use of the MDCs and that all personnel use their MDCs as outlined in this procedure.
- k. Each Battalion Chief is responsible to ensure all companies within their Battalion have successfully logged on to their MDC by 0800 each morning.
- l. The on duty Dispatch Lieutenant will report by email to the Assistant Chiefs all companies or personnel that routinely fail to follow the procedures outlined in this procedure.

G. Performance objectives for alarm handling.

- a. The fire department's performance objective for alarm answering times are: Not more than 15 seconds for at least 95 percent of the alarms received and not more than 40 seconds for at least 99 percent of the alarms received, as specified by NFPA 1221: Standard for the Installation, Maintenance, and use of Emergency Services Communication Systems, 2013 edition.

H. Performance objectives for turnout and travel times

- a. The fire department's performance objectives for turnout and travel times shall provide service delivery objectives, including specific time objectives for each major service component [i.e., fire suppression, emergency medical services (EMS), and special operations] and objectives for the percentage of responses that meet the time objectives, as specified by NFPA 1710: Standard For The Organization and Deployment of Fire Suppression Operations, Emergency Medical Operations, and Special Operations to the Public by Career Fire Departments, 2013 edition. The fire department objectives for travel and turnout times are:
  - i. 80 seconds for turnout time for fire and special operations response and 60 seconds turnout time for EMS response.
  - ii. 240 seconds or less travel time for the arrival of the first arriving engine company at a fire suppression incident and 480 seconds or less travel time for the deployment of an initial full alarm assignment at a fire suppression incident.
